

Figure 1 consists of two wiring diagrams for a 12V battery system. The left diagram is for a vehicle with a 12V battery (G2H-1) and a 15A fuse (F1/23). The right diagram is for a vehicle with a 12V battery (G2H-12) and a 15A fuse (F1/24). Both diagrams show the battery connected to a fuse, then to a relay (K1-5 or K1-9), and then to various components including the engine control unit (ECU), air conditioning (A/C), and other electrical systems. The diagrams use standard automotive symbols for wires, fuses, relays, and components.
